1.   The following is an examiner's statement of reasons for allowance:

The prior art of record fails to teach or render obvious the limitations as in claims

1,12,22,23 by the applicant to achieve node translation for communicating over virtual

channels in a clustered multiprocessor system having plurality of nodes, including local

and remote processing element nodes wherein a local processing element node which

includes a processor and a communication engine for assigning a connection descriptor

to a virtual connection which specifies an endpoint node for the virtual connection by

defining a local connection table accessible by the communication engine configured to

be accessed using the connection descriptor to produce a system node identifier for the

endpoint node and within the processor a communication request is generated which

includes the connection descriptor and in response to the request accessing via the

communication engine the local connection table to produce the system node identifier

using connection descriptor for the endpoint node for the virtual connection and sending

a memory request from the communication engine to the endpoint node, wherein the

memory request is sent to the local processing element node if the endpoint node is the

local processing element node, and is sent over the network interconnect to the remote

processing element node if the endpoint node is the remote processing element node

and wherein transfer of data associated with the memory request occurs independently

of the processor that generated the communication request.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
